

Setting Up Your Account

Water is purchased by setting up a pre-paid service account. Customers must complete and submit a Bulk Water Fill Station Water Use Permit application.

Account set-up can be completed at Skagit PUD's office during regular business hours, Monday – Friday, 8 a.m. to 5 p.m. There is a \$30 one-time charge for setting up an account. Accounts can be re-filled by calling Customer Service with a credit card number. You may also pay with a check or cash at Skagit PUD's office.

The 2024 water rate is \$0.005922 per gallon.

Parts & Fittings

Customers using the bulk water station will need a **two-inch hose with a female camlock fitting**. These fittings can be purchased from many local retailers.

Skagit PUD does not warrant water provided by fill stations after passing the meter as suitable for domestic/potable use.

24-Hour Bulk Water Fill Station

Skagit Public Utility District's bulk water fill stations are sites where commercial businesses, agricultural operations, and the general public can purchase large volumes of water at easily accessible locations. Skagit PUD operates three bulk water fill stations, allowing 24-hour daily access to bulk water. Customers can fill smaller tanks up to and including large commercial tanker trucks. The easy-access terminal provides security and ease of use.

How to Operate Fill Station

1. Remove cap from fill station outlet and ensure fill hose is in place before accessing the control panel.

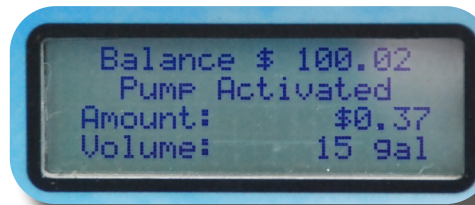

2. Enter your PIN or swipe pre-paid card.

3. Type in desired number of gallons.

4. Push ENTER to begin filling.

The entry screen will display the following information:

- Balance of funds remaining on card.
- Dollar amount and volume accruing as water is pumped into your storage tank.
- Final water charge at completion of transaction.

Pump Operation

Pumping stops when the quantity entered is reached or "stop" is pressed. You are charged for water you accessed from the system, not the amount entered. In instances where "stop" is pressed before your entered fill amount, you will be charged for the actual amount used and not the entered fill quantity.

Due to the time it takes for the valve to close, the actual water volume delivered will be approximately 20 gallons more than the amount selected at the pump.

For example, if you are filling a 500-gallon tank, you will want to enter 480 gallons on the screen. As the valve closes, it will top off your tank at approximately 500 gallons. You will be charged for the actual amount used and not the entered fill quantity.

Use Restrictions

Water provided by fill stations must be beneficially used within Skagit PUD's approved service area.

Non-compliance with the terms and conditions of a fill station permit may result in revocation of fill station approval and/or denial of future access.
